<p><b>Your comments:</b></p>	<p>I was lead to believe that a vote for this Government was a vote to push for more sustainable provision of energy, and to move away from fossil driven energy. I also believe that ERYC has declared a climate emergency along with many other authorities already signed up to raise their concern over the effects of global warming and have indeed issued their own warnings of the "global emergency" created by all countries using fossil fuels, which the science suggest is already causing long term damage to the world and its resources.</p> <p>It is difficult to have any faith in a government or council that claims they only intend developing in line with a green clean agenda and provide a solution to our climate emergency when we witness the ceaseless increase in the development of polluting industries like oil/gas extraction and incinerators taking place in all areas of the county. Indeed this area already suffers from poor decision making resulting in the loss of good productive farmland, homes and livelihoods as a result of costal erosion due to rising sea levels. We also suffer as a population from higher than average poor health and lower life expectancy which is hardly surprising given policy decisions made to date.</p> <p>It is for these reasons that I object to this expanded site operation and question what such expansion of the facility at West Newton will do for this government goal and the health of this County</p>
