**Your comments:**

Reasons for my objection:

Gas and oil are non renewable and the future energy sources must be renewable such as solar and wind. Both gas and oil emit Carbon Dioxide and my understanding is that as a nation we are trying to reduce carbon emissions. Burning oil and gas from this development will contribute to further climate change, global warming, depletion of the ozone layer and further pollution of air, water and the soil. Further development will increase noise pollution and result in increased smell of chemicals released from the processing. The flare stacks required to burn off unwanted waste gases will also further contribute to pollution and Carbon dioxide. This year we have many examples of climate change resulting in extreme weather, flooding and fires. All a consequence of burning fossil fuels. Both gas and oil require large storage facilities and hence further destruction of the natural environment. There will be increased traffic transporting the products on the narrow roads which are already in a poor state of repair and congested with traffic thus compromising road safety for both vehicles and pedestrians. The infra structure in this area is not designed to enable further development. Expansion of this oil and gas field will contribute to further destruction of already fragile natural habitats and wild life. We should be trying to preserve our environment not continuing to destroy it. We need to be trying to protect and preserve the already fragile environment for future generations. Any councillor who votes for this who has children or grandchildren should be ashamed of themselves. We should be trying to improve the environment not allow it to be desiccated by huge profit making businesses.
