Your comments:

I Object on a number of grounds, the biggest being how ludicrous this application is. All we hear about from the government is how we all have to go green. we are told from 2025 we aren't allowed new gas boilers, I believe from 2030 we aren't allowed new oil boilers, new petrol cars banned from 2030, old septic tanks discharging into the water courses banned..... its all about going green and banning things we all use and don't want to stop using. We aren't given a choice in any of these things and we have to watch when we buy everything from china and India who are super pollutants. So this is the reason why I find this application ludicrous and if its passed then the government / council are hypocrites, why should we have to give up all these things that use fossil fuels that we like using to have to then use electric products that cost far more to buy and cost far more to use because we have to hit green targets to then be told we now have to accept a huge facility that's going to extract such a huge amount of fossil fuels at a time where we are preparing/ being told we have to stop using the majority of things that use fossil fuels!. Also this is so contradictory to the green future and climate the government wants us to be. this plant is going to cause so much more greenhouse gasses, from the extracting, the use of the fuels when extracted and the thousands and thousands of lorries giving out pollution to the people who live in the area. Doesn't this whole application go against the green future that the government wants!?

On top of this, all the roads are going to get clogged with the lorries, travelling times will be increased, there will be more accidents, I object to the loss of the farmland which to me is more important to the country and climate than this application for this site.
